The speed of the course is...

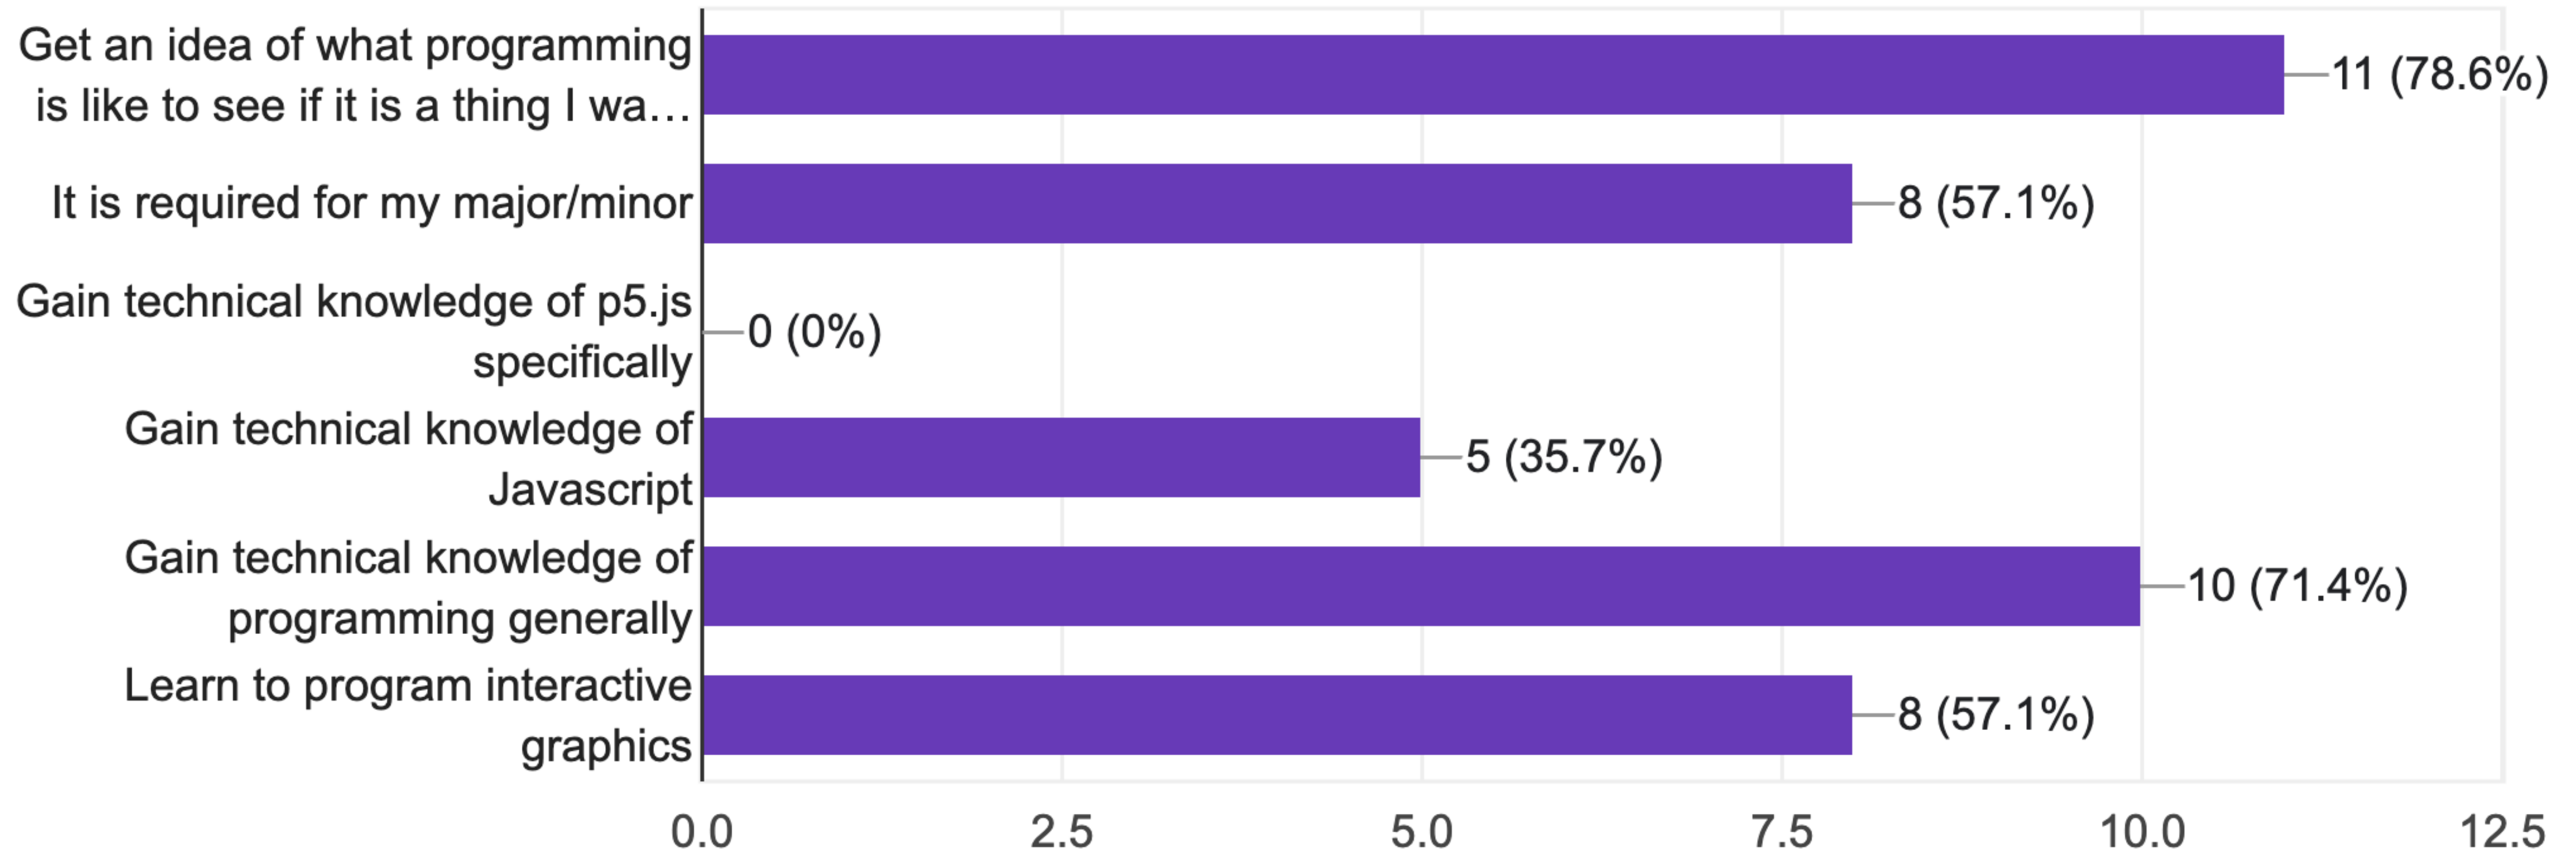

14 responses

- Way too slow
- A bit slow
- Just right
- A bit fast
- Way too fast

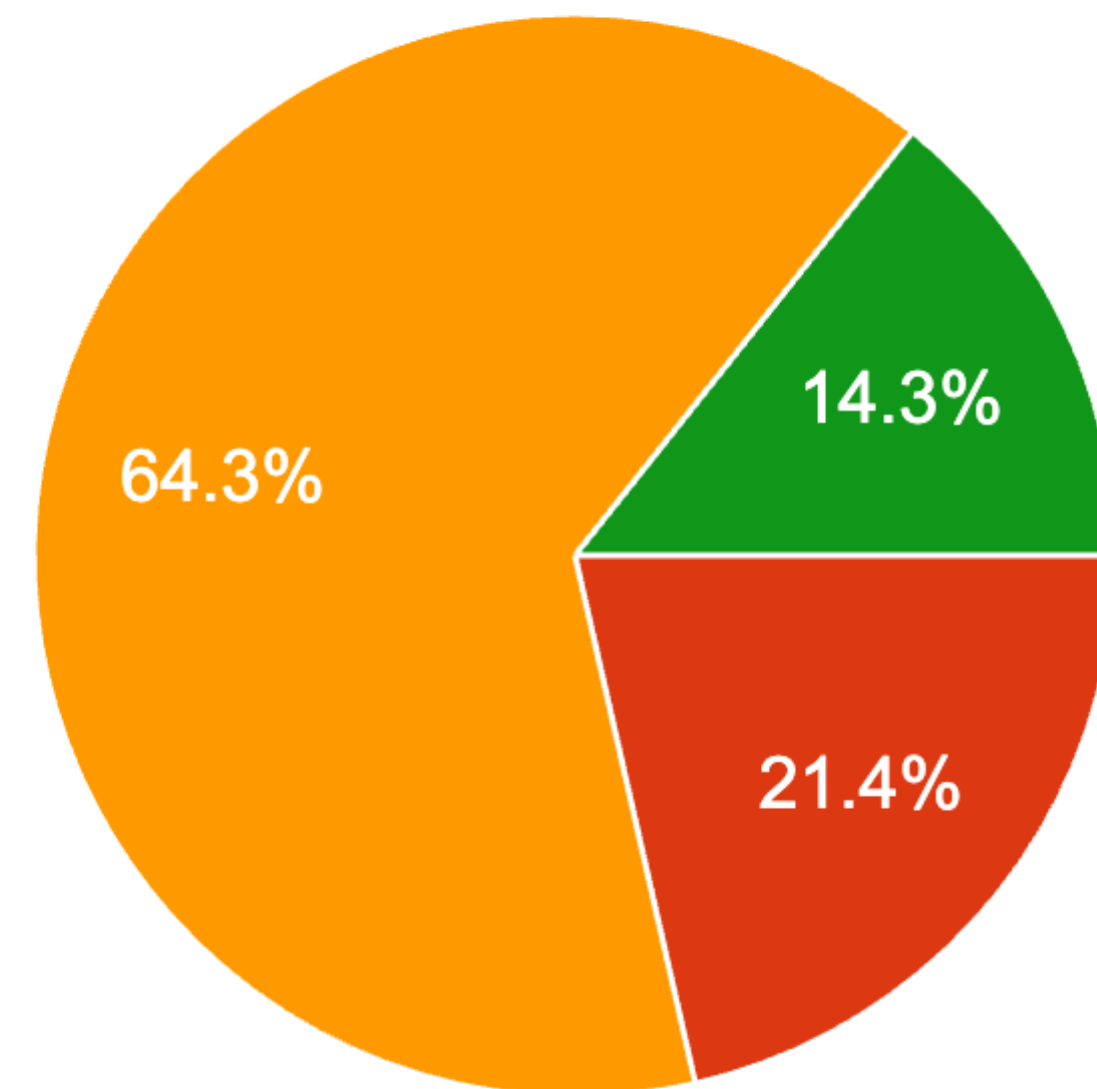

(Pick all that apply) The thing I want from this course is...

14 responses

Based on your response from the last question, how much is the course giving you what you need so far?

14 responses

- Not at all
- Somewhat
- All I hoped for
- All I hoped for and more 🏆

Comment Box

- “Favorite class I’m taking rn”
- Want to see what others have made for project in past semesters
 - No history (you’re the first class doing this!) but try openprocessing.org
 - The examples there are advanced and polished, so don’t feel bad

Comment Box

- Going too fast to really let things sink in
 - This is normal - don't get discouraged!
 - Only functions & objects remain, then we're on to project
 - The project should give you time and room to explore

Comment Box

- Worried that p5 is too much sandbox & not getting real Javascript experience
 - Yes, and
 - After the core topics we'll have room to cover other topics, like:
 - Using “real” editors like VS Code, Neovim, Webstorm
 - Using node & npm to build bigger projects in plain JS
 - Other languages 🙈
- P5 *is* a sandbox, but a very transferrable one. All of this is valid JS

Comment Box

- “I also just fully do not understand coding, my brain is not meant for this”
- Come to office hours 😊
- Tuesday & Thursdays 1–2 and 3:30–4:30 in Atlas 225, the undergrad commons
- Also all the LAs have office hours too
